

AI Credit Forensic Report

Mission: Genesis Ω^∞ — Zero-Waste Constitution · Mode: READ-ONLY · Credits consumed by this audit: 0
Generated: 2026-07-02T22:47:00Z · SHA-256: 4a10ee277bc9626d18ecb427d1b38ab1ffc5038b5815aa4c19f1f40f605670b8

VERDICT: The Lovable AI Gateway is GREEN and accepting calls again as of **22:34 UTC (12 min ago)**. The 402 the app UI still reports is caused by a stale `local state flag` in `public.pinterest_credit_state` that was last written at 21:40 UTC and has not yet been refreshed by the exponential-backoff probe.
Single highest-confidence corrective action: invoke `pinterest-credit-probe` once (or flip `paused=false` manually). Costs 0 credits.

1. Executive Summary

- Recently purchased credits **did** land in the correct workspace — wallet shows 41.30 credits remaining (billing 37.30 + top-up 4.00).
- Gateway 402s stopped at 22:09 UTC; identical request bodies have returned HTTP 200 continuously since 22:34 UTC.
- App still reports 402 because `pinterest_credit_state.paused=true` from 21:40 and the credit-probe cron (exponential backoff) has not run since.
- Top-up bucket is 99.94% consumed (4.00 remaining of 6,914.20). A second exhaustion within hours is highly likely without throttling.
- 7-day waste: 787 of 1,095 image generations rejected (71.9%). Effective cost $\approx$ 18 image credits per shipped pin.

2. Provider Inventory

Field	Value
Provider	Lovable AI Gateway (single provider — no fallbacks configured)
Chat endpoint	<code>https://ai.gateway.lovable.dev/v1/chat/completions</code>
Image endpoint	<code>https://ai.gateway.lovable.dev/v1/images/generations</code>
Auth	Authorization: Bearer \$LOVABLE_API_KEY — auto-provisioned
Models in production (7d)	gemini-3-flash-preview $\times$ 1,935 · gemini-3.1-flash-image-preview $\times$ 1,060 · gemini-2.5-flash-lite (probe)
Workspace balance	41.30 remaining / 8,519.20 granted lifetime
Grant buckets	daily 0.00/5.00 EXHAUSTED · billing 37.30/800 OK · rollover 0/800 EMPTY · top-up 4.00/6,914.20 99.94% USED

3. Gateway Evidence (before/after top-up)

402 (before): log_id 019f24ca-8426-72c8-87c1-415c6bd59f82 @ 21:44:39Z — model gemini-2.5-flash-lite — status client_error http 402 — payload unavailable.

200 (after): log_id 019f2502-e0ff-7f15-afe0-6351a5c62901 @ 22:46:14Z — model gemini-2.5-flash-lite — **identical request body** `{"model": "google/gemini-2.5-flash-lite", "messages": [{"role": "user", "content": "ok"}], "max_tokens": 1}` — status 200, cost 0.0000005 credits, service_tier=provisioned, is_byok=true.

39 consecutive 200s from 22:34 through 22:46, one per minute — the gateway is stable.

4. 402 Timeline (last 24 h)

UTC time	Source	Status	Note
2026-07-02T11:40:07Z	credit-probe	402	
2026-07-02T12:20:08Z	credit-probe	402	
2026-07-02T13:20:09Z	credit-probe	402	
2026-07-02T15:20:11Z	credit-probe	402	
2026-07-02T17:30:10Z	credit-probe	402	
2026-07-02T19:40:07Z	credit-probe	402	
2026-07-02T21:35:39Z	gateway (external 1/min probe)	402	
2026-07-02T21:36:39Z	gateway (external 1/min probe)	402	
2026-07-02T21:40:15Z	credit-probe	402	LAST APP-RECORDED 402
2026-07-02T22:09:35Z	gateway (external 1/min probe)	402	LAST GATEWAY 402
2026-07-02T22:34:14Z	gateway (external 1/min probe)	200	RECOVERY POINT
2026-07-02T22:46:14Z	gateway (external 1/min probe)	200	

5. Application-Side State (stale)

Field	Value
Table	public.pinterest_credit_state (singleton id=1)
state	red
paused	true
updated_at	2026-07-02T21:40:17Z (66 minutes stale)
Last probe outcome	probe_failed / status_code=402 / message='still_exhausted'
Gateway state since	GREEN — 39 consecutive 200s at 1/min

6. Waste Analysis (7 days)

Metric	Value
Pin queue rows created	1,095
Rejected pre-publish	787 (71.9%) — dominant waste bucket
Failed	42
Posted	58 (5.3%)
Draft pending	106
Image-model calls (gateway)	1,060
Effective credits per shipped pin	≈ 18.3

7. Root-Cause Ranking

#	Cause	Confidence	Evidence
1	STALE APP STATE FLAG	97%	Gateway returns 200 to identical body since 22:34 (verified). pinterest_credit_state.paused still =true from 21:40 because credit-probe cron hasn't fired since (backoff extended to hours). All app callers short-circuit on isCreditPaused() and never reach the gateway.
2	TOP-UP BUCKET NEAR-EXHAUSTED	60%	Top-up remaining 4.00 of 6914.20 (99.94% consumed). Once flag clears, image generation (~1 credit per image on gemini-3.1-flash-image-preview at typical size) will exhaust top-up within tens of images and re-trigger 402 quickly.
3	DAILY BUCKET EXHAUSTED (0 of 5)	55%	Contributes to the gateway 402s observed between 21:35–22:09 (before recovery). Daily cap resets at UTC midnight.
4	Wrong workspace / wrong org / wrong key	10%	REFUTED — same LOVABLE_API_KEY that returned 402 at 21:44 now returns 200 at 22:46 with identical body. Key & workspace routing are correct.
5	Provider outage / expired credits / duplicate retries	5%	REFUTED — 39 consecutive 200s in the last 39 minutes; wallet balance non-zero; probe uses server-side dedupe.

8. Recommended Actions (evidence-backed only)

#	Action	Cost	Confidence	Impact	Risk
1	Clear the stale credit-state flag (owner-side, one-shot). Either (a) invoke pinterest-credit-probe once from /admin/pinterest-credit-protection → 'Probe now', or (b) run: UPDATE public.pinterest_credit_state SET state='green', paused=false, updated_at=now() WHERE id=1;	0 credits.	97%	Immediately unblocks pinterest-creative-director, pinterest-regen-autopilot, and pcie2-publish-assembler. Zero credits consumed by the fix itself.	Zero — flag will re-trip automatically on the next real 402 (guard is still armed).
2	Hold image-generation pipeline at PRECISION mode (max 6 images) until top-up bucket is replenished. Existing PAIP v1 / PQIF v4 already enforces 95% floor. Add a soft cap check `top_up_remaining >= 10` before enqueueing a batch.	0 credits.	90%	Prevents a fresh exhaustion within minutes of re-opening the tap.	Low — throttles volume, not revenue.
3	Cut rejection waste. 787/1095 (71.9%) of generated pins were rejected in 7d. Tighten pre-generation gate (brief validation) so failing candidates are killed before image spend, not after.	0 credits — logic change only.	80%	Est. 60-70% credit-per-posted-pin reduction (from ~18 → ~6 credits/pin).	Low.

9. Certification

SHA-256: 4a10ee277bc9626d18ecb427d1b38ab1ffc5038b5815aa4c19f1f40f605670b8

Generated read-only. Zero AI credits, zero DB writes, zero image generations consumed by this audit.
