

PRIE Autonomous Pipeline — Implementation Report

Date: 2026-06-26

Status: DEPLOYED — fully autonomous, no manual bootstrap required.

Orchestrator: prie-auto-orchestrator (edge function)

Steps (in order): pinterest-analytics-sync, sync-ga4-daily,
pinterest-revenue-brain, prie-brain-sync, prie-revenue-predictor

Triggers:

- Cron every 15 minutes (job: prie-auto-orchestrator-15min)
- DB trigger on pinterest_pins INSERT/UPDATE (debounced 5 min)
- DB trigger on products INSERT (debounced 5 min)
- UI auto-invoke when last snapshot >30 min old; live refresh every 5 min

Audit: every run logged to prie_timeline_events (kind=auto_orchestrator).

Data sources: real Pinterest pins/funnel/pdp_conversion, orders, ga4 daily,
pinterest_revenue_* tables, products. No fabricated metrics.

Dry run (trigger=deploy): ok=true, total=117.3s

pinterest-analytics-sync ok 111.0s

sync-ga4-daily ok 1.4s

pinterest-revenue-brain ok 1.8s

prie-brain-sync ok 1.6s

prie-revenue-predictor ok 1.5s

Removed manual UI steps:

- 'Run Brain Sync' → replaced by 'Force refresh now' (optional)
- 'Recompute predictions' → now automatic

Regression: edge function 200 OK; UI routes intact; no schema breakage.

Next: Wave 2 (Pin Quality + Creative Evolution + Self-Learning) continues autonomously.
