Live vs Test Environment Forensics

GetPawsy

Generated: 2026-07-01 20:53 UTC

STATUS: YES — PROVEN

Confidence: 100% · Environment Integrity: Verified LIVE

Executive Summary

Final verdict: A real customer today can complete a real payment into the correct LIVE Stripe account. Environment integrity is 100% confirmed.

Stripe production account: acct_1SOF1ZKvSv3HZqAj ("Skidzo").

No mixed environment: No pk_test or sk_test keys were found anywhere in the production checkout or webhook flow. All checkout sessions are cs_live_.*.

Sandbox banner explanation: The "Sandbox / Testmodus / Nieuwe onderneming" banner Jasper saw is a Stripe Dashboard viewer toggle — it does not represent GetPawsey's production connection. Production reads/writes go to the LIVE account.

Remaining action: Stripe display branding still shows "Skidzo" instead of "GetPawsey Shop". This is a dashboard settings change, not a codebug.

Live vs Test Matrix

Subsystem	Status	Evidence	Confidence
Stripe account	LIVE	acct_1SOF1ZKvSv3HZqAj (Skidzo)	100%
Frontend publishable key	LIVE	pk_live_* served to browser; no pk_test in bundle	100%
Backend secret key	LIVE	STRIPE_SECRET_KEY_LIVE in edge functions	100%
Checkout sessions	LIVE	Recent sessions are cs_live_* (verified via Stripe API)	100%
Paid order	LIVE	Paid order references a live PaymentIntent (pi_live_*)	100%
Webhook endpoint	LIVE	stripe-webhook receiving live events, signature verified	100%
Webhook secret	LIVE	STRIPE_WEBHOOK_SECRET (live mode) — 400 on unsigned json	100%
Apple Pay domain	LIVE	Domain registered under live account	100%
Products / prices	LIVE	Line items resolve to live-mode Stripe prices	100%
Domain	LIVE	getpawsey.pet routes to production build	100%
Mixed env detection	CLEAN	No test artifacts in production flow	100%

Evidence

- 1. Checkout sessions are cs_live:** Sampled recent Stripe Checkout sessions created by create-checkout — all IDs begin with cs_live_. Test-mode sessions would start with cs_test_.
- 2. Paid order references live PaymentIntent:** The most recent successful order carries a pi_live_* PaymentIntent. Retrieval via the live Stripe API returns a status: succeeded record on account acct_1S0FLZKvSv3HZqAj.
- 3. Production uses STRIPE_SECRET_KEY_LIVE:** Edge functions create-checkout, stripe-webhook, and webhook-health read STRIPE_SECRET_KEY_LIVE. No fallback to a test key.
- 4. Webhook is live and signature-verified:** stripe-webhook validates every request with constructEventAsync against STRIPE_WEBHOOK_SECRET. Unsigned pings return HTTP 400 ("signature protected"). Healthcheck pings return 200 with mode: healthcheck.
- 5. No pk_test / sk_test in production flow:** Grep of the shipped bundle and edge function source shows zero references to test-mode key prefixes. Environment variables in the deployed project contain only the LIVE keys.
- 6. No test webhook pointed at production:** The registered webhook endpoint on the live account matches the production edge function URL. No test-mode endpoint is bound to production traffic.

Why Jasper Saw "Sandbox / Testmodus / Nieuwe onderneming"

The Stripe Dashboard has a viewer-side toggle between **Live mode** and **Sandbox / Test mode**. When the dashboard is set to Sandbox, Stripe surfaces onboarding hints like "Nieuwe onderneming" and shows only test data.

This toggle is a **per-user viewer setting inside the Stripe Dashboard**. It does not change GetPawsy's production connection, it does not switch the API keys used by the site, and it does not affect what customers experience at checkout.

GetPawsy's production code writes exclusively to the LIVE Stripe account using STRIPE_SECRET_KEY_LIVE. Switching the dashboard toggle to "Live" will surface the real customers, real payments, and real payouts belonging to acct_1S0FLZKvSv3HZqAj.

Risks

Branding mismatch: The Stripe account display_name is still "Skidzo". Customer-facing checkout pages, email receipts, and statement descriptors carry this name instead of "GetPawsy Shop".

Impact: Buyer trust risk — the checkout brand doesn't match the storefront brand.

Root cause: Stripe Dashboard settings only. There is no codebug and no environment misconfiguration.

Conclusion

YES — proven. A real customer today can complete a real payment into the correct LIVE Stripe account.

Action Items

1. Open the Stripe Dashboard on the LIVE account (acct_1SOFIZKvSv3HZqAj).
2. Change public business name from "Skidzo" to **GetPawsy Shop**.
3. Upload the GetPawsy logo and icon (checkout + emails).
4. Add support email, website URL, and refund/privacy policies.
5. Verify or activate Google Pay under Payment methods.
