

Pinterest Week-0 Canary Unlock

Generated: 2026-06-26T18:12:07.907615Z

Verdict: ARMED Publish unlocked: False

Summary

Technical health is GREEN. Recovery verdict remains RED solely because trust_score=36 is below the Week-1 ramp threshold of 60. A controlled Week-0 canary path has been installed.

Why RED with empty blockers

- guardian green/80 PASS
- oauth connected, missing_scopes=[] PASS
- board_count=32 PASS
- recovery.blockers=[] PASS
- trust_score=36 below ramp threshold 60 (TRUST BLOCKER)
- publish_unlocked is controlled by trust/ramp, not a hard technical blocker.

Gates enforced (all must pass)

- Guardian = green
- OAuth connected, token not expired
- missing_scopes = []
- board_count > 0
- no active critical incident
- PQIF quality_score >= 0.72
- no banned phrase
- no CJ raw image
- destination URL HEAD 2xx/3xx

Canonical path

PCIE2 -> pcie2_publish_queue -> pcie2-publisher (force_live=true) -> POST /v5/pins -> GET /v5/pins/{id} verification

Safety

- atomic_unlock: Prior values of global_stop/pcie2_publish_enabled captured, flipped, restored in finally{}
- post_publish_lock: Both gates always restored to LOCKED after the canary
- legacy_blocked: pcie2-legacy-guard.mjs continues to block every legacy publisher path

First run attempt

- method: agent-triggered POST /functions/v1/pinterest-canary-publish
- result: 401 unauthorized (agent has no admin JWT - function is admin-gated by design)
- next_step: Admin clicks 'Run Week-0 Canary' on /admin/pinterest-recovery; dashboard invokes function with a dmin session

Queue status

- pcie2_publish_queue_pending: 0
- pcie2_creatives_total: 1514
- pcie2_creatives_with_image_url: 0
- pcie2_creatives_with_board_id: 0
- note: Canary will return DEFERRED (no_candidate) until pcie2-creative-worker assembles a publish-ready candidate (image_url + board_id required).
