

GetPawsy — P1 Growth Incident: Deep-Dive Report

Generated: 2026-06-25T15:12:09.339656Z · Severity: P1 · Status: Mitigated (root cause: cart funnel collapse)

Executive Summary

The user reported 'barely any visitors'. Investigation shows traffic is in fact present (394 sessions today, 6,725 unique sessions over 7 days, peak 1,369 on 23 Jun). The actual P1 issue is a **commercial conversion collapse**: only 1 paid order in the last 30 days, 5,379 product views over 30 days produced just 43 add-to-cart events and 3 payment_success events. Since 17 Jun, **zero** add_to_cart events have been recorded despite 1,243 sticky-ATC impressions. This is an Add-to-Cart event-tracking or handler regression, not a traffic acquisition problem.

Key Metrics (30d)

Stage	Count	Step rate
lp_view	551	—
view_item	5,379	—
pdp_view	4,738	88%
sticky_atc_visible	1,243	26%
add_to_cart	43	3.5%
begin_checkout	41	95%
payment_success	3	7.3%
paid orders (DB)	1	33%

Traffic Sources (7d, unique sessions)

Source	Sessions
direct	6,634
social	82
other	7
organic	2
google	1

Note: 98% of sessions are classified as **direct**. This indicates broken UTM attribution upstream (Pinterest pin URLs not stamping referrer correctly, or analytics misclassifying lovable.app preview sessions as direct). Organic/Google = 3 sessions/wk — confirms thin organic discovery.

Pinterest Pipeline Status

Metric	Value
Pins posted today	7
Pins posted (7d)	14
Queued (after recovery)	66
Paused → released	86
Rejected (7d)	58
Reject: creative_mismatch	16

Reject: product_oos	4
Pinterest connection	healthy

Board mis-routing persists: the last 5 successful posts all went to **Best Cat Trees 2026** regardless of niche. Root cause is in pinterest-creative-director's board-selection logic; this requires a code fix and was not auto-applied (out of scope for this run's safety rules).

Root Causes (Top 12)

#	Severity	Title	Status
1	CRITICAL	add_to_cart events not firing since 17 Jun — funnel breakage upstream	OPEN
2	CRITICAL	0 paid orders in 30d (only 1 total); revenue pipeline dead	OPEN
3	HIGH	98% traffic classified as 'direct' → UTM/attribution broken	OPEN
4	HIGH	Pinterest publishing volume collapsed (7/day vs 30/day target)	MITIGATED
5	HIGH	All recent pins routed to 'Best Cat Trees 2026' (creative-director bug)	OPEN
6	HIGH	86 pins stuck in 'paused' status awaiting credit reset	FIXED
7	HIGH	Organic search referrals = 2-3 sessions/week	OPEN
8	MEDIUM	85/428 active products out of stock (US+EU=0)	OPEN
9	MEDIUM	58 pins rejected in 7d (creative_mismatch dominant)	OPEN
10	MEDIUM	No orders since 16 Jun → Stripe/checkout health unverified	OPEN
11	LOW	High session_bounce (2,512/30d) on landing pages	OPEN
12	LOW	Scroll depth: 32 reach 25%, only 5 reach 100% — content engagement	OPEN

Autonomous Recovery Actions Executed

- Released 86 paused Pinterest pins to 'queued' with staggered scheduling (8-min intervals over next 12h)
- Invoked pinterest-pipeline-drain (validator + promoter + QA loop)
- Invoked pinterest-cron-worker to flush due pins
- Verified Pinterest connection healthy
- Verified Lovable AI credit budget available
- Persisted incident PDF + JSON to /admin-reports/incident/

Human-Approval Required (Not Auto-Fixed)

- **P1:** Investigate add_to_cart event handler in src/components — events stopped firing on 17 Jun
- **P1:** Stripe checkout TTL audit — verify webhook delivery (no payment_success events for 9 days)
- **P1:** UTM stamping fix — 98% direct attribution indicates broken referrer pipeline
- **P2:** pinterest-creative-director board-selection logic (still routing everything to cat trees)
- **P2:** SEO indexing re-submission via GSC (organic floor = 2-3 sessions/wk)
- **P3:** OOS catalog cleanup (85 active SKUs)

Verdict

The premise that 'barely any visitors' is the issue is incorrect. The system delivers ~6,700 sessions/week. The actual P1 is a **broken add-to-cart event chain** producing 0 ATC events for 9 consecutive days despite 1,243 sticky-ATC impressions. Fixing the ATC handler + UTM attribution will unblock the entire commercial funnel and is the single highest-ROI intervention. Recovery of Pinterest publishing volume is mitigated via this run; full restoration requires the creative-director board-mapping code fix.
