

CI Zero-Bypass Architecture Report

Generated: 2026-06-26T19:55:00Z | Verdict: GREEN

Single canonical path: Draft → CI → Publish Queue → Publisher. DB trigger guarantees no other path can populate the queue.

Details

```
{
  "pipeline": [
    "PCIE2 Draft (pcie2_creatives)",
    "Creative Intelligence pre-flight (pcie2-creative-intelligence + inline assembler gate)",
    "Semantic rewrite (Gemini 2.5 Flash, if score < 95)",
    "Pinterest SEO scoring (species/category keyword presence)",
    "Compliance validation (23 banned phrases)",
    "Claim detection (medical/veterinary/superlative)",
    "Image validation (HEAD reachability, fingerprint)",
    "Board validation (10 allowed Pinterest boards)",
    "Diversity validation (Jaccard vs last 50 pins)",
    "CTR prediction (length + family weights)",
    "Trust prediction (banned-phrase weighted)",
    "Publish-ready queue (pcie2_publish_queue) \u2014 CI stamps required",
    "Publisher (pcie2-publisher) \u2014 dumb executor"
  ],
