

PCIE2 Draft → Publish-Ready Queue Recovery

Generated: 2026-06-26T18:56:14.306397Z · Verdict: **GREEN**

Executive Summary

Assembled 100 publish-ready rows from 200 PCIE2 drafts in one run. pcie2_publish_queue went from 0 → 100 ready. Publishing remains LOCKED (global stop + canary cap). Legacy publishers remain 410/blocked.

Run Metrics

target_reached	23

Diagnosis

Drafts total: 1514 · with headline: 716

Root cause: PCIE2 creative drafts never assigned image_url or board_id; no component bridged drafts → pcie2_publish_queue.

Fix: New canonical assembler pcie2-publish-assembler maps board from product slug/category, recovers image_url from product asset, builds canonical /products/{slug}?utm_source=pinterest destination, enforces banned-phrase + quality + idempotency.

Safety Gates (unchanged)

- app_config.pinterest_publishing_global_stop = true (unchanged)
- app_config.pcie2_publish_enabled = false (unchanged)
- pinterest_canary_mode = 1/24h (unchanged)
- pcie2-legacy-guard.mjs blocks every legacy publisher
- Assembler never calls Pinterest API; only writes pcie2_publish_queue

Sample Queue Rows (5/100)

Next Recommendations

HIGH

- Schedule the assembler hourly (cron) so new PCIE2 drafts auto-flow to queue.
- Expand BANNED list to include 'vets recommend' & 'X out of N vets' style claims before Guardian re-evaluates queued rows.

MEDIUM

- Add per-board fill quotas so no single board dominates the queue.
- Add HEAD-check image validation in scheduled runs (skipped in recovery batch for speed).

LOW

- Surface board_mapping_reason histogram in admin dashboard.
