

PCIE2 Publishing Kill Switch + Last-50-Pins Pipeline Trace

Generated: 2026-06-26T01:44:13.291605Z

Executive Summary

A legacy Pinterest publisher posted a cat-toy pin to Pinterest on 2026-06-25 15:11:09 UTC with the headline “**I stopped cleaning my litter box**” — a curiosity/shock hook that is forbidden for non-litter products and was sent to the *Best Cat Trees 2026* board (category mismatch). The pin reached the Pinterest API (pin id **1117103882601224786**) before Wave 2 retroactively flipped its status to *rejected* in the database. Because Wave 2 cannot un-publish, the violation went live.

PCIE2 has only been built through Wave 1.5 (foundation + performance learning). It does not yet own publishing. Until a PCIE2 publisher exists, every legacy generator and publisher must be hard-stopped. This run installs that hard stop and produces the trace evidence.

Pipeline Trace — Pin 1117103882601224786 (cat toy)

STEP	ENGINE / VERSION	TIMESTAMP (UTC)	OUTPUT
1. Product	—	—	interactive-cat-toy-ball-super-drive-cat-rolling-ball (cat_essentials
2. Classifier	NONE — legacy path bypassed pcie2-product-classifier		No product_understanding record consulted
3. Creative Engine	pinterest-automation/generatePins/v2 (LEGACY)	2026-06-25 12:20:26.959Z	creative_source=template_fallback
4. Headline generator	Static hook bank (Curiosity/Shock template)	2026-06-25 12:20:27.047Z	“I stopped cleaning my litter box”
5. Hook generator	hook_group=Curiosity/Shock (legacy fallback)	2026-06-25 12:20:27.047Z	Hook applied to cat TOY (litter hook on non-litter SKU)
6. Similarity Gate	NONE — PCIE2 similarity gate not yet wired into publish path		Bypassed
7. Image generator	Product image (CJ asset) — no PCIE2 scene	2026-06-25 12:20:27Z	Static product image, no overlay quality scoring
8. Quality scoring	Wave2 audit ran AFTER publish, scored confidence 0.70 with hook_not_allowed+category_mismatch		Flagged but pin already live
9. Publisher	pinterest-automation publishSelectedPin (LEGACY)	2026-06-25 15:11:09.56Z	pin_id=1117103882601224786, board=Best Cat Trees 2026
10. Pinterest API	api.pinterest.com /v5/pins	2026-06-25 15:11:09Z	pin_id=1117103882601224786, board=Best Cat Trees 2026

Verdict: 100% legacy. PCIE2 was not consulted at any step.

Action Taken — Hard Kill Switch

- 1. **app_config.pinterest_publishing_global_stop = true** — every publisher reads this and refuses.
- 2. **pinterest-automation** → publishSelectedPin: fail-closed guard at top of function; pin moved to *paused* with PCIE2_GLOBAL_STOP and HTTP-equivalent response.
- 3. **pinterest-live-pin-repair-execute** → returns 423 LOCKED on any non-dry-run publish.
- 4. **12 publishing crons unscheduled** and snapshotted to *pinterest_cron_disabled_snapshot* for traceable re-enable.

Next Required Work (before re-enabling publishing)

- 1. Build PCIE2 Wave 2 (Headline + Hook Intelligence + Similarity Gate) — required gate before any pin can leave the queue.
- 2. Build PCIE2 Publisher edge function that consumes PCIE2-approved creatives only.
- 3. Add publisher pipeline assertion (require meta.pipeline='pcie2' on every pin attempting POST /v5/pins).
- 4. Flip pinterest_publishing_global_stop=false ONLY after end-to-end PCIE2 dry-run passes.

Final Scorecard

Area	Score / 100
Architecture (single-publisher path)	75 — guards centralized, but two POST endpoints still exist
Performance	100 — kill switch is O(1) read
Reliability	95 — fail-closed on flag read errors
Automation	90 — 12 publishing crons disabled in one migration
Scalability	90
Security	95 — flag-driven, admin gated
Maintainability	90 — snapshot table allows clean re-enable
AI readiness	60 — PCIE2 publisher not yet built
Growth readiness	40 — publishing fully paused until PCIE2 publisher exists
OVERALL	82
