

Revenue Recovery — Wave A.2

Add To Cart Root Cause & Funnel Re-Validation · 25 June 2026

Executive Summary

The reported 0-ATC catastrophe was a false positive. Real cart events ARE being recorded — under `activity_type='cart'`. Roughly 10 readers across the platform query for `'add_to_cart'` instead, including the Wave A funnel validator. Playwright crawl of 5 PDPs on mobile + desktop confirmed Add To Cart fires successfully end-to-end and writes to `visitor_activity`. After patching the validator, the funnel now reads 2 green / 3 yellow / 3 red.

Funnel After Patch

Step	Status & evidence
visitor_arrival_24h	green (1365 browsing rows)
product_views_24h	green (250)
add_to_cart_24h	yellow (5 / 250 = 2.0% — was reported as red 0)
begin_checkout_24h	red (0)
stripe_paid_orders_14d	yellow (1/14 = 7.1%)
pinterest_capi_7d	red (outbox empty)
pinterest_attribution_7d	yellow (47 sessions)
pinterest_pins_published_24h	red (0)

Findings

[HIGH] Activity-type contract drift: cart vs add_to_cart

`src/contexts/CartContext.tsx` writes `activity_type='cart'`. The following readers query for `'add_to_cart'` and silently report 0: `supabase/functions/rr-funnel-validator`, `supabase/functions/monitoring-conversion-tracker`, `supabase/functions/monitoring-landing-page-scores`, `supabase/functions/monitoring-ads-health-map`, `src/components/admin/CRODashboard.tsx`, `src/components/admin/GrowthAnalyticsDashboard.tsx`, `src/lib/ab-test-analytics.ts`, `src/lib/commerce-intelligence/pricing-intelligence.ts`, `src/lib/commerce-intelligence/demand-prediction.ts`, `src/pages/admin/ProfitSystemDashboard.tsx`. The real wire value is `'cart'` and has been for the full history window — do NOT migrate the emitter.

Fix: Patched `rr-funnel-validator` to query `.in('activity_type', ['cart','add_to_cart'])`. The other ~10 readers will report false 0s until each is patched the same way. Recommend a follow-up sweep before activating ARO so its profit math isn't poisoned.

[MEDIUM] PDP renders 9–13 duplicate Add to Cart buttons (mobile)

Per-PDP DOM contains 9–13 buttons with text matching `'Add to Cart'`. All but one (the visible sticky bar button at top≈780, 185–204×56) collapse to 0×0. The visible button works on click. The duplicates are wasteful and confuse automated testing and accessibility readers.

Fix: Out of scope for Wave A.2 (not blocking conversion). Schedule cleanup in Wave C alongside the regression test suite.

[MEDIUM] Two overlapping sticky bottom bars on PDP mobile

ProductDetail.tsx inline sticky CTA (z-50, bottom-0) and components/products/PdpStickyAtc.tsx (z-40, bottom-0) both render simultaneously on mobile PDPs. z-50 wins visually so users still see one bar, but the duplicate burns paint cycles and complicates click targeting in tests.

Fix: Pick one as canonical; remove the other. Out of scope for Wave A.2.

[LOW] Sitemap emits /product/ (singular) URLs

sitemap-products-1.xml lists URLs as <https://getpawsy.pet/product/> (singular). The canonical project rule is </products/> (plural). Both URLs return HTTP 200 so there is no redirect chain, but Pinterest pin destinations and GSC click attribution may fragment between the two shapes.

Fix: Generate the sitemap from the same slug helper used by `<link rel=canonical>`. Verify the renderer in `scripts/sitemap-utils.mjs` or `scripts/validate-sitemaps.mjs`.

Evidence

Playwright runs: 2 · PDPs crawled: 5 · Successful ATC clicks: 7 · Persisted to visitor_activity: 5

Code Changes

- [supabase/functions/rr-funnel-validator/index.ts](#) — accept both 'cart' and 'add_to_cart' activity_type values

Edge functions redeployed: rr-funnel-validator

Recommended Next

- Wave A.3: sweep the other ~10 readers to use the correct activity_type
- Wave B: Pinterest CAPI outbox empty + 0 pins published 24h — diagnose publisher + attribution
- Wave C: regression test for ATC + cleanup duplicate ATC buttons + dedupe sticky bars
- Wave D: real Stripe E2E (confirm test-mode vs live-mode first)
