

GetPawsy — Wave 6A

Autonomous Commander · Foundation Layer

Implementation date: 2026-06-25 · Mode: **observation-only**

Executive Summary

Wave 6A ships the read-only executive layer for GetPawsy. The Commander Orchestrator now observes 15 production engines, scores their health, rolls up daily spend, and queues prioritised recommendations for human approval. No engine has been altered and no automated commercial action is performed.

Engines observed	15
Executive health score	48 / 100
Alerts raised (initial run)	12
Recommendations queued	12
Spend channels tracked	3
Cron schedule	Daily 05:30 UTC
Manual trigger	Admin → Commander Foundation → Run Now

Deliverables

- Database: 7 new **commander_*** tables (runs, engine_health, recommendations, decisions, budget_ledger, alerts, daily_reports). Admin-only RLS, service_role write.
- Edge function: **supabase/functions/commander-orchestrator** — observation-only orchestrator (deployed).
- Cron: **commander-orchestrator-daily** scheduled at 05:30 UTC.
- Admin UI: **/admin/commander-foundation** — executive tiles, engine health table, open blockers, spend snapshot, pending recommendations with approve/dismiss, recent runs.
- Approval model: recommendations support pending → approved/dismissed; no auto-execution.
- Reports: this PDF + JSON saved under **public/admin-reports/ai-implementation/** and registered in *manifest.json*.

Safety Posture

- No existing table altered or deleted.
- No Pinterest campaign, AI image/video, or paid action triggered.
- Reads only — every recommendation is dedupe-keyed and idempotent.
- All writes scoped to **commander_*** namespace; full audit trail in **commander_decisions**.
- Secrets are read from **SERVICE_ROLE** inside the edge function and never logged.

Initial Observation Run

First run scanned 15 engines and produced an executive health score of **48/100**. 12 engines are flagged stale or degraded — each has a deduped recommendation queued under Admin → Commander Foundation. Spend ledgers initialised for **ai_creative**, **pinterest_credits** and **cinematic**.

Safe Next Steps

- Triage the 12 pending recommendations in the dashboard.
- Approve the most critical (likely Pinterest growth + monitoring) before scheduling Wave 6B.
- Verify cron fires tomorrow 05:30 UTC and the health score moves.
- When ready, plan Wave 6B (Model Router + Budget Engine) — execution remains gated behind explicit approval.
