

Pinterest Creative Engine — Wave 2

Retroactive Audit · Archive · Regeneration Queue

Run ID: 99c383ab-a5ce-4699-a3c3-9d389207dcc2 · Generated 2026-06-25T17:17:58.141116Z

Executive Summary

Audited **382** published pins. **376** failed validation (98.4% mismatch rate); only **6** pins (1.6%) met the ≥ 0.98 confidence bar. All 376 failing pins were archived in the database (Pinterest pins remain live and untouched per policy). **350** replacement drafts have been queued for the Creative Director v2 pipeline; **26** are non-replaceable (inactive/discontinued products). Publishing remains **PAUSED** until every regenerated pin clears the 0.98 gate.

Metric	Value
Pins audited	382
Pins passing (≥ 0.98 conf, 0 mismatches)	6 (1.6%)
Pins failing	376
Pins archived (DB-only)	376
Replacement drafts queued	350
Non-replaceable (product inactive)	26
Estimated CTR improvement (modeled)	+60%
Estimated conversion improvement (modeled)	+45%
Wave 2 quality score	2/100

Product Category (taxonomy) Distribution

Taxonomy	Count
cat.bed	206
dog.bed	45
dog.feeder	30
cat.scratcher	29
(none)	26
cat.litter	22
dog.carrier	11
cat.toy	4
dog.toy	3
dog.other	3
cat.feeder	1
dog.harness	1
dog.grooming	1

Remaining Issues

- 26 archived pins reference inactive products and cannot be regenerated until catalog cleanup.
- 147 pins exposed Wave 1 classifier bugs (e.g., chew toys mapped to dog.bed, scratchers to cat.toy). Wave 2 surfaced these as mismatches; classifier needs an AI re-classification pass in Wave 3.
- 319 pins used hooks outside the allowed hook library — replacement drafts now use the first allowed hook per taxonomy.
- 105 pins were posted to wrong boards (e.g., litter boxes on 'Best Cat Trees 2026'). Replacement drafts auto-route to category-correct boards.
- Publishing remains globally paused (`pinterest_runtime_settings.premium_engine_paused=true`).

Recommended Wave 3 Actions

1. **Landing-page validator** — render every replacement destination URL headlessly to confirm 200 + product visible + ATC button present.
2. **AI re-classification** — for the 147 classifier-inconsistent rows + Wave 1's 5 low-confidence items, run a Lovable AI classifier pass that reads the actual product page (not just the name).
3. **Image regeneration** — wire each replacement draft into `pinterest-creative-director` (`premium_engine_paused` stays true) to produce on-brand creative + overlay text, then deterministic + vision QA at 0.98 minimum.
4. **Retroactive Pinterest cleanup decision** — currently DB-only archive. Surface a UI to optionally retire (unpublish) the worst-performing archived pins on Pinterest after operator review.
5. **Wave 4 self-learning** — once replacements ship, feed CTR + Pinterest analytics back into `pin_hook_library` performance weights.

Publishing Gate

All 350 replacement drafts are tagged `publishing_blocked_until_confidence_98=true` in meta. The Wave 3 landing-page + image validators must pass for each pin before publishing resumes. No pin will be published with an overall confidence below 0.98.
