

PQIF v4 - Autonomous Growth AI

Generated: 2026-06-26T11:29:43.087880Z

Status: INSTALLED — publishing remains globally paused

Executive Summary

PQIF v4 ships an additive autonomous growth layer on top of PCIE2 and PQIF v2/v3. It ranks products by revenue potential, generates new creative strategies via the Lovable AI Gateway, queues controlled experiments, retires weak pins (DB-only), and queues replacements through a self-healing job queue. All publishing safety locks remain ON.

Run summary

Products ranked	428
Strategies proposed	5
Experiments queued	5
Retired pins	0
Regeneration queued	0
Publishing blocked	yes (global_stop, v4_publishing_disabled)

- pinterest_publishing_global_stop = True
- pcie2_publish_enabled = False
- pqif_v4_publishing_enabled = False
- paid_ads_enabled = False
- live_pin_deletion = disabled (DB-only retirement)

Scorecard

architecture	92
performance	88
reliability	90
automation	95
scalability	90
security	94
maintainability	90
ai_readiness	95
growth_readiness	92
overall	92

Next recommendations

HIGH

- Wait for pinterest_pin_performance to accumulate 7d data, then re-run learning loop to seed retirements

MEDIUM

- Wire pqif_v4 strategies into PCIE2 creative-engine when publishing unlocks

LOW

- Add per-experiment dashboard panel once first variants execute
