Implementation Summary

What: Shipped Wave 1 of the Autonomous Growth Platform: observability tables (agp_runs, agp_run_steps, agp_settings), a self-healing watcher edge function, and an admin command center at /admin/autonomous-growth.

Why: Establish a safe foundation (kill-switch, auto-mode flags, run telemetry) before activating autonomous media, creative, and publishing pipelines.

Extended: Existing CPE pipeline tables, Cinematic V3 dispatcher, Pinterest growth engine, CJ media orchestrator

Untouched: Pinterest publishing, Cinematic rendering workers, Checkout / orders / payments, Product schema

Expected impact: Operators now have a single command center to monitor and halt autonomous engines. No production behavior changes — all auto modes default OFF.

Files

Path	Change	Reason
supabase/migrations/<wave1>_agp_foundations.sql	created	agp_runs / agp_run_steps / agp_settings tables + RLS + grants
supabase/functions/agp-self-healing-watcher/index.ts	created	Detect stuck CPE/Cinematic/CJ jobs and orphan Pinterest rows (log
src/pages/admin/AutonomousGrowthPage.tsx	created	Command center UI for growth scores, AI spend, kill switch, issues
src/App.tsx	modified	Register /admin/autonomous-growth route
