

Pinterest Creative Intelligence Engine V2 — Wave 1

Generated: 2026-06-26T00:49:48.922439Z

Scope

Additive foundation for an autonomous Pinterest Creative Director. Nothing existing was modified.

Delivered

- New tables: pcie2_product_understanding, pcie2_headline_library, pcie2_hook_library, pcie2_creatives, pcie2_runs (RLS enabled, admin-read, service-role write).
- Edge function pcie2-product-classifier: admin-only, classifies active products into 15 functional classes using Gemini 2.5 Flash Lite with a rule-based fallback. Upsert, idempotent.
- Admin page /admin/pinterest-creative-intel-v2 with coverage + class tally + run history.
- Feature flag pcie2_publish_enabled added to app_config (default false). PCIE2 cannot publish until you flip it.

Compatibility

Existing Pinterest automation (Wave 3A/3B, Golden Batch, Control Center, autopilot) is untouched. No tables, functions, or cron jobs were altered.

Next: Wave 2

Headline Forge + Hook Matcher + Similarity Gate (per-class headline bank with embedding dedupe; hook■product semantic validation).

Status: PASS
